Pre Migration Migration Documents

Pre-Migration Processes:

Source Folder **Destination Folder**
(Copy and Paste) The path where your original source of Forms Objects (FMBs, MMBs, OLBs, PLLs) are located. (Copy and Paste) This is the path where your Forms Objects will be moved to, after the cleanup process.

Process Clean-Up During the Clean-Up process, a) all dependencies from referenced object references are removed b) The value attributes are copied back to the FMB module, and the c) cleanup.log The referenced objects are detached

Generate Definition File Once the clean-Up is performed, Generate the Definition File. Send this file to Release3 Inc at licensing@release3.com. A license file will be issued on the basis of this definition file.

Upload License File

Process Clean-Up

Clean-Up process allows you to remove OLB dependencies from the Oracle forms and transfers the visual attributes from the object library to the original form.

The Source and destination folder paths are provided in this form. The Files being cleaned-up will be over-written, and so it is important to have 2 separate folders.

Important: The destination folder is required to be filled. This will be the source for the “Definition file” (required to generate the licenses).

If there is no clean-up required for your set of Forms, the destination folder should contain the name of the folder where the Forms Source files are located...

| | | | |
|--------------------------|--|---|--|
| Source Folder | <input type="text" value="C:\TRANSFORMtoolkit\SampleForms"/> | Destination Folder | <input type="text" value="C:\TRANSFORMtoolkit\SampleForms"/> |
| | <small>(Copy and Paste) The path where your original source of Forms Objects (FMBs, MMBs, OLBs, PLLs) are located.</small> | | <small>(Copy and Paste) This is the path where your Forms Objects will be moved to, after the cleanup process.</small> |
| Process: Clean-Up | <input type="button" value="Process"/> | <small>During the Clean-Up process, a) all dependencies from referenced object references are removed b) The value attributes are copied back to the FMB module, and the c) cleanup.log The referenced objects are detached</small> | |

[Process: Generate Definition File:](#)

- Place all the Forms Objects into a single folder
- Copy & Paste the path of this folder into the Destination Folder field
- Press “Generate Definition File” button
- Send it to Release3 at info@release3.com

A Licenses file as ordered and paid for, will be generated by Release3 and sent back to you.
